

Collaborative Relationships with National and International Organizations and Societies

JAS has developed collaborative relationships with national and international organizations and societies. It is vital to work together to achieve our missions as a professional association standing for individuals with communication and feeding/swallowing difficulties.

JAS has worked closely with medical associations of related areas (otorhinolaryngology, neurology, pediatrics) and rehabilitation (especially physical therapy and occupational therapy). Our collaborative works include holding seminars and workshops jointly or implementation of disaster countermeasures.

JAS has been one of the three affiliated societies of International Association of Logopedics and Phoniatrics (IALP) in Japan since 2000. IALP is an international organization established in 1924 and its aims are to facilitate science, education, and clinical practice through international cooperation and collaboration.
